1. (S/NF/SK) Tasking: See attached tasking data sheet. No other instructions provided.

2. (S/NF/SK) Session: In monitor's opinion, session went well, i.e., good structure, etc. However, source experienced a great deal of self doubt/lack of confidence with regard to whether or not he was "on to" the correct site.

3. (S/NF/SK) Summary: Site involves a wide, open area and what may be a blockhouse. From this area, what seems to be a test is conducted. A person at the site is fairly satisfied with the results of the test, but anticipates minor equipment changes. (AOL's: 'MIRV' and 'Space Shuttle').

4. (S/NF/SK) Feedback: During session break, source was informed that the ops officer had expressed no negative feedback to the monitor.

Site involves wide open, austere area, w/ low solid structure w/ windows + person observing. Observers is observing experimentation project + is satisfied that things have progressed according to plan. Design modifications are involved, + evaluation of parameter + effects is being conducted. Project involves long, shiny, smooth, cylindrical object. Rapid vertical movement for a long distance is involved, which at point becomes a falling down + avoided, followed by skipping, bumping, heat, slaking whistling, ^{controlled} descending - not falling - which ~~less~~ culminates at a predetermined location in another flat, austere area, w/ the object intact. Object seems to be hollow, enclosing something, + suggests the smell of the air inside an aircraft. Strong A02/10/s of
